

**ABSTRACT**

The present invention is a bathroom cabinet for mounting on a wall. The cabinet body has an internal storage area for receiving items to be stored and a cabinet body lip. The cabinet body has a top sidewall, a bottom sidewall, a hinge  
5      sidewall and a non-hinge sidewall, the top sidewall connected to the hinge  
sidewall by a first corner structural element, the top sidewall connected to the  
non-hinge sidewall by a second corner structural element; the bottom sidewall  
connected to the hinge sidewall by a third corner structural element, the bottom  
sidewall connected to the non-hinge sidewall by a forth corner structural element.  
10      A cabinet door is pivotally mounted to the cabinet body. A cabinet seal is  
coupled to the cabinet body lip such that the cabinet seal substantially covers the  
outer cabinet body lip.
